Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi.

Disclosure; Page 108; 166pp; English.

The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXXBA and its derivatives selected from XZBZBXXXBA BXZXB, XBBXZXBBX and BBXZBBXZ; and (b) as second peptide template XBBXZXBBXXBBX and BBXZBBXZ; and (b) group consisting of XBBXBX, XBBXXBBX, BXXBXXB, XBBZXXBB, and XBBZXXBBXXZBBX; where B = at least one positively charged amino acid; and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of

half-lives due to biodegradation. The peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide

neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AAY57463 to AAY57557 represent sequences used in the exemplification of the present invention

                                                                                           WO9942119-A1
                                                                                                                                                            Yeaman MR,
                                                                        Synthetic.
             AAY57469;
```

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acids containing a 7-13 amino acid core sequence (derived from PMP-1 and PMP-2, platelet microbicotadal protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial activity of

leukocytes against organisms such as bacteria and fungi. The antimicrobial peptides are useful as individual antimicrobial agents, specifically against bacteria and fungi, agents in combination with other antimicrobials, agents that enhance, potentiate or restore efficacy of conventional antimicrobials, agents that enhance the antimicrobial functions of leukocytes, a disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular biology techniques. Antimicrobial peptides of prior art have generally

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acids containing a 7-13 amino acid core sequence (derived from 150 amino acids containing a 7-13 amino acid core sequence (derived from 150 amino acids containing a 7-13 amino acid core sequence (derived from 150 amino acid core sevensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also or for potentiating antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fungic and timicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides are useful as individual antimicrobial agents that enhance, potentiate or restore efficacy of antimicrobials, agents that enhance the antimicrobial conventional antimicrobials, agents that enhance the antimicrobial conventional antimicrobials, agents that enhance the antimicrobial conventional and antimicrobials.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  biology techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short half-lives due to biodegradation. The peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antimicrobial, platelet microbiocidal protein, PMP-1, PMP-2, bacterial infection, fungal infection, fungicide, disinfectant, preservative, foods, cosmetic, multiple antibiotic resistance, rabbit,

```

```
The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBXB and its derivatives selected from XZBBZBRARB, BXZZSB, XBBXZBBX and BBXZBBXZ; and (b) as second peptide template XBBXXBBX, BXXBXXBB, and their derivatives selected from the group consisting of XBBXZBBX; where B = at least one positively charged amino acid, x at least one non-polar hydrophobic amino acid, z = at least one aromatic amino acid, and where B, and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal nections. The peptides overall effect cellular disruption and rapid apptosis of microbial cells. AAY57463 to AAY57557 represent sequences
                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

euthocytes against organisms such as bacteria and fungi. The antimicrobial peptides are useful as individual antimicrobial against bacteria and fungi, agents in combination with other specifically against bacteria and fungi, agents in combination with other conventional antimicrobials, agents that enhance the antimicrobial functions of leukocytes, as disinfectants or preservatives for use in functions of leukocytes, as disinfectants or preservatives for use in functions of leukocytes, as disinfectants or preservatives for use in bloody techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short hard have been actual antimicrobial peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and covercome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprissing a peptide of 5-150 amino acids containing a 7-13 amino acid core sequence (derived from PMP-1 and PMP-2, platelet microbiocidal protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, condinations and fusions; and (2) antimicrobial peptides for potentiating antimicrobial activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against conganisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZEXENE and its derivatives selected from XZBEZEXENE and BRXZBEX, as second peptide template XBEXXXXBX, XBEXXXBX, and BRXZBBX; and (b) a second peptide template XBEXXXBX, BXZEXXB, SEBZEXBBX, and their derivatives selected from the group consisting of XBEXXBBX, and their derivatives selected from the group consisting of XBBXXBBX, and their derivatives selected from the are least one non-polar hydrophobic amino acid; z = at least one aromatic amino acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of intercents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AAY57463 to AAY57557 represent sequences used in the exemplification of the present invention

The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) of antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides are useful as individual activity of leukocytes against organisms such as bacteria and fungi. The antimicrobial peptides are useful as individual antimicrobial agents that enhance, potentiate or restore efficacy of conventional antimicrobials, agents that enhance the antimicrobial agents that chance the antimicrobial in the conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents that enhance the antimicrobial the considered to have undesirable toxicity, immunogenicity and short beingogy techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short that based upon natural antimicrobial peptides that have potent and broad resistance. They exhibit lower inherent mammalian cell toxicities and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                      Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an antimicrobial peptide composition for use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        resistance. They exhibit lower inherent mammalian cell toxicities
                                                      Rabbit platelet microbicidal protein, PMP-2, based peptide #39
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (HARB-) HARBOR-UCLA RES & EDUCATION INST.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example; Page 72; 221pp; English.

The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXEBAB and its derivatives selected from XZBBZBXEBAB, BXXZRSB, XBBXZBBAB and BBXZBBXZ; and (b) a second peptide template XBBXX and their derivatives selected from the group consisting of XBBXBBX, XBBXXBB, BXXBXB, XBBXZBBZ, and consisting of XBBXBBX, XBBXXBB, BXXBXB, BXBBXXBB, and activative of XBBXXBBXZBBX; where B = at least one positively charged amino acid; X = at least one non-polar hydrophobic amino acid; Z = at least one aromatic amino acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AMST7463 to AAYS7757 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi.

                                                                                                                à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acid corre sequence (derived from 150 amino acid a containing a 7-13 amino acid corre sequence (derived from PWP-1 and PWP-2, platelet microbicidal protein), and retromers.

Truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations of the peptides described above, and retromers, extensions, combinations and fungions; and (2) antimicrobial peptides for potentiating antimicrobial agents are useful as individual antimicrobial agents, specifically against bacteria and fungi, agents in combination with other antimicrobial peptides are useful as individual antimicrobial agents conventional antimicrobials, agents that enhance the antimicrobial conventions of leukocytes, as disinfectants or preservatives for use in foods and commercies and as agents to improve efficiency of molecular considered to have undesirable toxicity, immunogenicity and short been considered to have undesirable toxicity, immunogenicity and short are based upon natural antimicrobial peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicity immunogenicity and considered to have inherent mammalian cell toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                     Antimicrobial, platelet microbiocidal protein, PMP-1, PMP-2, bacterial infection, fungal infection, fungicide, disinfectant, preservative, foods, cosmetic, multiple antibiotic resistance, rabbit,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 52; DB 5; Length 18;

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-6150 amino acide scontaining a 7-13 amino acide foors esquence (derived from PMP-1 and PMP-2, platelet microbiocidal protein), and recromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides for potentiating antimicrobial agents described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides for potentiating antimicrobial agents that enhance the dungi. The leukocytes against organisms such as bacteria and fungi. The cantimicrobial peptides are useful as individual antimicrobial agents that enhance the antimicrobial agents that enhance the antimicrobial agents that chance the antimicrobial or conventional antimicrobials, agents that enhance the antimicrobial or foods and cosmetics and as agents to improve efficiency of conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular complexed to have undesirable toxicity, immunogenicity and short are based upon natural antimicrobial peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic creatstance. They exhibit lower inherent mammalian cell toxicitys in plasma and complement sequence is a rabbit pWm based antimicrobial peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

the present invention describes an administratory produce with the corganisms such as bacteria and fungi. The AP comprises: (a) a peptide corganisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XBEXXBEX and its derivatives selected from XZBBZBXBEX BXXXBX XBEXXBX ABXXBEX BX ABBXXBBX and BBXZBBX; and (b) a second peptide template XBBXXBBX, BXXBXB, XBBXXBBX, and the group consisting of XBBBBX and their derivatives selected from the group consisting of XBBBX and their derivatives selected from the corp. The peptide template amino acid; Z = at least one aromatic amino acid. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial calls. AAYS7453 to AAYS7557 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes an antimicrobial peptide (AP) for direct

The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms and the as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXEXBX and BBXZBBXZ; and (b) a second peptide template XEXE, BXZXXXB, XBBXZXBX and BBXZBBXZ; and (b) are second peptide template XBBXX and their derivatives selected from the group consisting of XBBXXBBX, XBBXXBX, XBBXXXB, and their derivatives selected from the group consisting of XBBXXBBXXBXXBX, and their derivatives can non-polar hydrophobic amino acid; Z = at least one aromatic amino acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal nections. The peptides overall effect cellular disruption and rapid applysis of microbial activity of apoptosis of microbial cells.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    half-lives due to biodegradation. The peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an antimicrobial peptide composition for use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

                                                                                                                                                                                                                                                                                              The invention trainers to an antimutational peptide comparising a peptide of 5-
150 amino acids containing a 7-13 amino acid core sequence (derived from
PWP-1 and PMP-2, platelet microbiocidal protein), and retromers,
truncations, extensions, combinations, funions and their derivatives. The
possible structures are fully described in the specification. Also
conclusions, extensions are fully described in the specification. Also
core sequence selected from truncations active against organisms such as
bacteria and fungi comprising a peptide composition for direct activity
or for potentiating antimicrobial agents active against organisms such as
core sequence selected from truncations of the peptides described above,
and retromers, extensions, combinations of the peptides described above,
and retromers, extensions, combinations of the peptides described above,
and retromers, extensions, combinations of the peptides described above,
and imicrobial peptides for potentiating antimicrobial activity of
antimicrobial peptides are useful as individual antimicrobial agents,
specifically against bacteria and fungi, agents in combination with other
conventional antimicrobials, agents that enhance the antimicrobial
conventions of leukocytes, as disinfectants or preservatives for use in
floods and cosmetics and as agents to improve efficiency of molecular
conventions of leukocytes, as disinfectants or preservatives for use in
the floods and cosmetics and as agents to improve efficiency of molecular
considered to have undesirable toxicity, immunogenicity and short
are based upon natural antimicrobial peptides of the present invention
are based upon natural antimicrobial peptides that have potent and broad
spectrum activity against pathogens exhibiting multiple antibiotic
conversemence. They exhibit lower inherent mammalian cell toxicitys and overcome problems of toxicity, immunogenicity, and shortness of defectiveness due to biodegradation, retaining activity in plasma and
covercome problems of toxicity, immunogenicity, and shor

The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against corganisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBXB and its derivatives selected from XZBBZBXBXB, BXXZXB, XBBXZXBX and BBXZBBXZ; and (b) a second peptide template XBBXX BXXXBXB, XBBXZXBBX, and their derivatives selected from the group consisting of XBBXBBX, XBBXXBBX, BXXBXXB, XBBXXXBB, and XBBXXXBBX, where B = at least one positively charged amino acid; and where B, X and Z amino acid; Z = at least one aromatic amino acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal controphils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AM57463 to AAY57557 represent sequences to see the antimicrobial activity of sections. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAY57499;
```

to an antimicrobial peptide composition for use

```
distriction relates to an antimicrobial peptide of 5-
150 amino acids containing a 7-13 amino acid core sequence (derived from
PWP-1 and PWP-2. platelet microbicidal protein), and retromers,
truncations, extensions, combinations, fusions and their derivatives. The
possible structures are fully described in the specification. Also
included are (i) an antimicrobial peptide composition for direct activity
or for potentiating antimicrobial peptide composition for direct activity
or for potentiating antimicrobial peptide of 13-74 containing an amino acid
core sequence selected from truncations of the peptides described above,
and retromers, extensions, combinations and fusions; and (2)
antimicrobial peptides for potentiating antimicrobial activity of
leukocytes against organisms such as bacteria and fungi. The
antimicrobial peptides are useful as individual antimicrobial agents,
specifically against bacteria and fungi, agents in combination with other
antimicrobials, agents that enhance the antimicrobial
conventional antimicrobials, agents the thance, potentiate or restore efficacy of
conventional antimicrobials, agents to improve efficiency of
conventions of leukocytes, as disinfectants or preservatives for use in
conventions of leukocytes, are disinfectants or preservatives for use in
considered to have undesirable foxicity, immunogenicity
been considered to have undesirable foxicity, immunogenicity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      half-lives due to biodegradation. The peptides of the present invention are based upon natural antimicrobial peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                             invention relates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 19 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 20

                                                                                                                                                                                                                                                           The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBXB and its derivatives selected from XZBBZBXBXB, BXZXZB, XBBXXZBB, and BBXZBBXZ; and (b) a second peptide template XBBXXBX, XBBXXBBX and their derivatives selected from the group consisting of XBBXBBX, XBBXXBBX, BXXBXXB, XBBXXBBX, and their derivatives selected from the group consisting of XBBXBBX, XBBXXBBX, BXXBXXB, XBBXXBBX, and consisting of XBBZBXBBX, XBBXXBBX, BXXBXXB, XBBZXXBB, and consisting of XBBZXBBX and their derivatives cone aromatic amino acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AX57463 to AAX5757 represent sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit;

New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.

Yeaman MR, Shen AJ; WPI; 2002-590659/63.

Example, Page 71-72; 221pp; English

```
core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations of the peptides described above, antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides are useful as individual antimicrobial agents are useful as individual antimicrobial agents.

Specifically against bacteria and fungi, agents in combination with other attimicrobials, agents that enhance the antimicrobial activity of conventional antimicrobials, agents that enhance the antimicrobial conventions of leukocytes, as disinfectants or preservatives for use in functions of leukocytes, as disinfectants or preservatives for use in commercies and cosmetics and as agents to improve efficiency of molecular biology techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short half-lives due to biodegradation. The peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiocic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                         against organisms such as bacteria and fund comprising a peptide of 5-150 amino acids containing a 7-13 amino acid core sequence (derived from PMP-1 and PMP-2, platelet microbiocidal protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above,
New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                           invention relates to an antimicrobial peptide composition for use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antimicrobial, metapeptide, PMP-2, platelet microbicidal protein, antibiotic; infection; fungal; bacterial; neutrophil; apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 47; DB 5; Length 19;

The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBXB and its derivatives selected from XZBBZBXBXB, BXZXZB, XBBXZXBBX and BMXZBBXZ; and (b) a second peptide template XBBXXXB, XBBXXXBBX and their derivatives selected from the group consisting of XBBXBBX, XBBXXXBX, BXXXBX, XBBXXXBB, and XBBXXBBX; where B = at least one positively charged amino acid; and where B, X and Z mino acid; Z = at least one aromatic amino acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AX57463 to AAX5757 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ğ

New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                           The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against conganisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXEBS and BBXZBBXZ; and (b) a selected from XZBZBXEBS, BXZXZB, XBBXZXBBX and BBXZBBXZ; and (b) a second peptide template XZBZXZB, XBBXZXBBX and their derivatives selected from the group consisting of XBBXZBBX, and their derivatives selected from the group consisting of XBBXBBX, BXXBXSB, BXZBXXB, XBBZXXBBX and their derivatively charged amino acid; X = t least one aromatic amino acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells. AAY57463 to AAY57557 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rabbit platelet microbicidal protein, PMP-2, based peptide #32

                                            The invention features to an antimuticional peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-
150 amino acids containing a 7-13 amino acid core sequence (derived from PMP-1 and PMP-2, platelet microbiocidal protein), and retromers,

truncations, extensions, combinations, funions and their derivatives. The possible structures are fully described in the specification. Also concluded are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fungi. The antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides for potentiating antimicrobial agents for potentiating antimicrobial agents.

Cole sepecifically against bacteria and fungi, agents in combination with other antimicrobial peptides are useful as individual antimicrobial agents that enhance the antimicrobial activity of conventional antimicrobials, agents that enhance the antimicrobial conventions of leukocytes, as disinfectants or preservatives for use in footen and as agents to improve efficiency of molecular conventions of leukocytes, as disinfectants or preservatives for use in the benchmiques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short or are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic covercome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, relating activity in plasma and coverceme problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, relating activity in plasma and a rabbit pwent and activity and shortness due to biodegradation, relati
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                               The invention relates to an antimicrobial peptide composition for use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antimicrobial, metapeptide, PMP-2; platelet microbicidal protein; antibiotic; infection; fungal; bacterial; neutrophil; apoptosis.

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acids containing a 7-13 amino acid core sequence (derived from PMP-1 and DMP-2, platelet microbiocidal protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also

included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as active adamenta and fungi comprising a peptide of 13-74 contraining an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) and retromers, extensions, combinations and funsions; and (2) core sequence selected from truncations and fungi. The attimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides are useful as individual antimicrobial agents. The appendix and fungi, agents in combination with other antimicrobials, agents that enhance, potentiate or restore efficacy of conventional antimicrobials, agents that enhance the antimicrobial conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular considered to have undesirable toxicity, immunogenicity and short half-lives due to biodegradation. The peptides of the present invention are based upon natural antimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic cresistance. They exhibit lower inherent mammalian cell toxicities and covercome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and covercome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and covercome problems of a rabbit pWP based antimicrobial peptide 8888888888888888888888888888888

New context-activated protide, useful for vascular injury, neoplastic condition, microbial infection, decreased cell death or inflammatory

Claim 1; SEQ ID NO 1; 103pp; English

condition.

The present sequence is that of Protide-1 (PT-1), a peptide antibiotide with distinct effector and activator domains. PT-1 contains a C-terminal antimicrobial peptide effector (RP-1), an N-terminal chemokine-like peptide effector (RP-1), an N-terminal chemokine-like peptide effector (interleukin-8 domain) and an activator site specific for staphylococcus V8 protease. PT-1 was designed to be cleaved into 2 construct effectors in the presence of V8 protease. In particular, it was designed to exert antimicrobial activity less than that of RP-1 in the presence of V8 protease produced by Staphylococcus aureus. Thus, PT-1 can adesigned to exert optimal antimicrobial activity in the context of infections due to staphylococcus aureus. Thus, PT-1 can adesigned to exert optimal antimicrobial activity in the context of infections due to staphylococcus aureus. Thus, PT-1 can synthesised by solid-phase synthesis. It is an example of context-activated protides of the invention that have 2 or context effectors with individual distinct biological functions and one or more effectors with individual distinct biological functions and one or more effectors upon context activation. The biological function of one or more effectors upon context activation. The protides are useful in the diagnosis, prophylaxis and therapy of a broad in a produced processes are useful in the diagnosis, prophylaxis and therapy of a broad in a produce and a produced produced in the diagnosis, prophylaxis and therapy of a broad in the diagnosis.

Antimicrobial peptides for potentiating antimicrobial agents active against bacteria and fungi

Disclosure; Page 126; 166pp; English

The present invention describes an antimicrobial peptide (AP) for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi. The AP comprises: (a) a peptide containing an amino acid sequence selected from the group consisting essentially of a first peptide template XZBZBXBXB and its derivatives aselected from XBBZXBXB. BXZXZB. WBXZXSBX and BBXZBBXZ, and (b) a second peptide template XBBX and their derivatives selected from transparent and consisting of XBBXBBX, XBBXXBBX, XBBXXBBX, and (b) group consisting of XBBXBBX, XBBXXBBX, XBBXXBB, and

```
New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
XBBZXXBBXXZBBX; where B = at least one positively charged amino acid; X = at least one aromatic amino acid; Z = at least one aromatic amino acid, and where B, X and Z may be separated by one or more other amino acids. The peptides can be used to treat bacterial and fungal infections. The peptides also increase the antimicrobial activity of neutrophils. The peptides overall effect cellular disruption and rapid apoptosis of microbial cells AAYS7463 to AAYS7557 represent sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     bacterial infection; fungal infection; fungicide; disinfectant;
preservative; foods; cosmetic; multiple antibiotic resistance; rabbit.
                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                       ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rabbit platelet microbicidal protein, PMP-2, based peptide #33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2;

```

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acids containing a 7-13 amino acid core sequence (derived from PMP-1 and PMP-2, platelet microbiocidal protein), and retromers, truncations, extensions, combinations, fusions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above,

and retromers, extensions, combinations and fusions; and (2) antinicrobial peptides for potentiating antinicrobial activity of leukocytes against organisms such as bacteria and fungi. The antinicrobial peptides are useful as individual antimicrobial agents, specifically against bacteria and fungi, agents in combination with other antimicrobials, agents that enhance, potentiate or restore efficacy of conventional antimicrobials.

PT-2 contains a C-terminal antimicrobial peptide effector (RP-1), an N-terminal chemokine-like peptide effector (Interleukin-8 domain) and an activator site specific for C3 convertase, a complement fixing protease. PT-2 is cleaved into 2 distinct effectors in the presence of C3 convertase. In particular, it was designed to exert antimicrobial activity less than that of RP-1 in the presence of C3 convertase. but equivalent to or exceeding that of RP-1 in the presence of C3 convertase. Thus, PT-2 was designed to exert in the presence of C3 convertase. Thus, pt-2 was designed to exert optimal antimicrobial activity in the context of activation of exert three complement pathways that make up the complement system, which is part of the innate immune response to antigen exposure. PT-2 is an
functions of leukocytes, as disinfectants or preservatives for use in foods and cosmerics and as agents to improve efficiency of molecular biology techniques. Antimicrobial peptides of prior art have generally been considered to have undesirable toxicity, immunogenicity and short half-lives due to biodegradation. The peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic resistance. They exhibit lower inherent mammalian cell toxicities and overcome problems of toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, recaining activity in plasma and serum. The present sequence is a rabbit PMP based antimicrobial peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New context-activated protide, useful for vascular injury, neoplastic condition, microbial infection, decreased cell death or inflammatory
                                                                                                                                                                                                                                                                                                           Gaps

ö
example of context-activated protides of the invention that have 2 or more effectors with individual distinct biological functions and one or more corresponding activator sites that can each initiate or amplify the biological function of one or more effectors upon context activation. The protides are useful in the diagnosis, prophylaxis and therapy of a broad range of pathological conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of Protide-3 (PT-3), a peptide antibiotide antimicrobial peptide effector and activator domains. PT-3 contains a C-terminal antimicrobial peptide effector (RP-1), an N-terminal chemokine-like peptide effector (interleukin-8 domain) and an activator site specific for thrombin. PT-3 was designed to be cleaved into 2 distinct effectors in the presence of thrombin. In particular, it was designed to exert antimicrobial activity less than that of RP-1 in the absence of thrombin. but equivalent to or exceeding that of RP-1 in the presence of thrombin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Thus, PT-3 exerts optimal antimicrobial activity in the context of thrombin as would be present in the setting of vascular injury or infection. PT-3 is an example of context-activated protides of the invention that have 2 or more effectors with individual distinct biological functions and one or more corresponding activator sites that can each initiate or amplify the biological function of one or more diffectors upon context activation. The protides are useful in the diagnosis, prophylaxis and therapy of a broad range of pathological conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New context-activated protide, useful for vascular injury, neoplastic condition, microbial infection, decreased cell death or inflammatory
                                                                                                                                                                                                       Gaps
